

CLOUD

# Connectra Cloud

Sovereign, managed enterprise file cloud and collaboration, hosted in Argentina.

- [Service brochure](#)

## Sovereignty

Data hosted on Connectra-owned infrastructure in Argentina, under company control.

## Collaboration

Document sync and sharing across the team and with third parties, with granular permissions.

## Online office

Edit documents, spreadsheets and presentations in the browser, with no software to install.

## Fully managed

Connectra operates, updates, backs up and supports the platform end to end.

## ConnectraCloud

Managed services for mining, energy and oil & gas

---

**SERVICE OVERVIEW**

## What it is for

Your corporate cloud for working on the company's information with full control, hosted in Argentina and operated by Connectra.

Connectra Cloud is a file storage, synchronization and sharing platform based on ownCloud and fully managed by Connectra. It lets teams store and share files across the mine site, offices and third parties, with access control and traceability.

It includes online office editing with Collabora: documents, spreadsheets and presentations open and edit directly in the browser, with no extra software to install and preserving standard office formats.

Data is hosted on Connectra-owned infrastructure in Argentina, providing data sovereignty, low latency and support during local business hours. It is the local, controlled alternative to public clouds for collaborating on sensitive documentation.

---

**HOW IT WORKS**

1

**Provisioning**

Connectra deploys the platform on infrastructure in Argentina and creates users, groups and quotas to match your organization's structure.

---

2

**Access and synchronization**

Your team logs in through the browser and installs the desktop clients and mobile apps, with selective sync for low-connectivity sites.

---

3

**Collaborative work**

Documents are edited online with Collabora and shared internally or externally through links with permissions, password and expiration.

---

4

**Managed operation**

Connectra monitors, updates and backs up the platform, and provides support during local hours for onboarding, offboarding and incidents.

## — FEATURES

## Features

01

### Cross-platform sync

Desktop clients for Windows, macOS and Linux plus mobile apps keep files up to date across every device.

02

### Controlled sharing

Internal and external share links with per-user permissions, password protection and expiration dates.

03

### Version control

Change history for every file to recover previous versions and roll back unwanted edits.

04

### Recycle bin

Deleted files remain in the recycle bin for a configurable period before permanent removal.

05

### Online editing

Collaborative editing of documents, spreadsheets and presentations in the browser via Collabora Online.

06

### Selective sync

Each user chooses which folders to sync locally, suitable for sites and teams with limited connectivity.

07

### Per-user quotas

Storage allocation per user or group, adjustable to each team's needs.

08

### Data sovereignty

Data hosted on infrastructure in Argentina, with encryption in transit and local technical support.

## — INDUSTRY APPLICATIONS

## Use cases in mining · Use cases in oil & gas

### Use cases in mining

- **Site-office-contractor collaboration**  
A single repository to share documentation across the mine site, head offices and contractors, with differentiated permissions per folder.
- **Drawings and engineering**  
Controlled distribution of drawings and engineering information with version control so every team works on the current document.
- **Compliance and safety documentation**  
Centralizes procedures, safety instructions and PPE records, with access traceability that helps support audits.
- **Low-connectivity sites**  
Selective sync lets teams at remote camps work only with the folders they need, optimizing satellite or radio links.
- **Sharing with third parties**  
Expiring, password-protected links to deliver documentation to suppliers and agencies without exposing the internal folder structure.

### Use cases in oil & gas

- **Field documentation**  
Shared repository of field documentation, facility drawings and wellhead diagrams, accessible from the field and the office.
- **Contractor and EPC collaboration**  
Shared spaces with scoped permissions to coordinate with contractors and EPC companies during works and maintenance.
- **Procedure version control**  
Versioning of operational and safety procedures to ensure personnel always use the approved revision.
- **Data sovereignty in Argentina**  
Critical field documentation stays hosted on infrastructure in Argentina, under company control.
- **Operation at remote locations**  
Selective sync and mobile apps so personnel at remote locations and wells can access documentation with limited connectivity.

— WHAT SETS US APART

## What sets us apart

### Sovereign cloud in Argentina

Information stays on national infrastructure under company control, as a local alternative to foreign public clouds.

### Integrated online office editing

Collaborative editing of documents, spreadsheets and presentations in the browser, with no additional licenses or installations.

### Built for the field and low connectivity

Selective sync and mobile apps enable productive work at remote locations over limited links.

— BENEFITS

- Secure document collaboration across mine site, offices and contractors.
- Productive work at remote sites thanks to selective synchronization.
- Reduced dependence on foreign public clouds and on foreign-currency costs.
- Data sovereignty and support in local hours and language.
- Recovery of versions and deleted files after mistakes or incidents.
- Managed platform: Connectra operates, updates and backs up the service.

— WHY CONNECTRA

### Industrial IT/OT specialists

We design for mining, energy and oil & gas, not the generic office.

### Local support and infrastructure

Datacenter and support in Argentina, billed locally with electronic invoicing.

### Managed 24/7 operation

We monitor and run the service so your team can focus on the business.

### Single ConnectraCloud identity

One login for every service, with two-factor and SSO.
