

— COMMERCIAL FLYER

Connectra Cloud

Your corporate cloud for working on the company's information with full control, hosted in Argentina and operated by Connectra.

| | | | |
|--|--|---|---|
| Sovereignty Data hosted on Connectra-owned infrastructure in Argentina, under company control. | Collaboration Document sync and sharing across the team and with third parties, with granular permissions. | Online office Edit documents, spreadsheets and presentations in the browser, with no software to install. | Fully managed Connectra operates, updates, backs up and supports the platform end to end. |
|--|--|---|---|

Connectra Cloud is a file storage, synchronization and sharing platform based on ownCloud and fully managed by Connectra. It lets teams store and share files across the mine site, offices and third parties, with access control and traceability.

It includes online office editing with Collabora: documents, spreadsheets and presentations open and edit directly in the browser, with no extra software to install and preserving standard office formats.

— HOW IT WORKS

- 1 Provisioning**
Connectra deploys the platform on infrastructure in Argentina and creates users, groups and quotas to match your organization's structure.
- 2 Access and synchronization**
Your team logs in through the browser and installs the desktop clients and mobile apps, with selective sync for low-connectivity sites.
- 3 Collaborative work**
Documents are edited online with Collabora and shared internally or externally through links with permissions, password and expiration.
- 4 Managed operation**
Connectra monitors, updates and backs up the platform, and provides support during local hours for onboarding, offboarding and incidents.

— BENEFITS

- Secure document collaboration across mine site, offices and contractors.
- Reduced dependence on foreign public clouds and on foreign-currency costs.
- Recovery of versions and deleted files after mistakes or incidents.
- Productive work at remote sites thanks to selective synchronization.
- Data sovereignty and support in local hours and language.
- Managed platform: Connectra operates, updates and backs up the service.

— INDUSTRY APPLICATIONS

- **Site-office-contractor collaboration**
A single repository to share documentation across the mine site, head offices and contractors, with differentiated permissions per folder.
- **Drawings and engineering**
Controlled distribution of drawings and engineering information with version control so every team works on the current document.
- **Field documentation**
Shared repository of field documentation, facility drawings and wellhead diagrams, accessible from the field and the office.
- **Contractor and EPC collaboration**
Shared spaces with scoped permissions to coordinate with contractors and EPC companies during works and maintenance.

— WHAT SETS US APART

| | | |
|--|--|---|
| <p>Sovereign cloud in Argentina</p> <p>Information stays on national infrastructure under company control, as a local alternative to foreign public clouds.</p> | <p>Integrated online office editing</p> <p>Collaborative editing of documents, spreadsheets and presentations in the browser, with no additional licenses or installations.</p> | <p>Built for the field and low connectivity</p> <p>Selective sync and mobile apps enable productive work at remote locations over limited links.</p> |
